Technical Architect at Publicis Sapient | shravantalla.com | AEM
Certified Master | AWS Certified Solutions Architect | Delivering AI
driven digital experiences with 15+ years in full stack development
Hyderabad, Telangana, India

Summary

As someone who thrives on turning complex challenges into elegant technical solutions, I find immense joy in my role as a Technical Architect at Publicis Sapient. With more than 15 years under my belt in full-stack development and software architecture, I've had the privilege of working with some incredible teams across different countries from India to the UK each experience shaping how I approach technology today. My journey has taken me from Hyderabad to Bangalore to London and back again, where I've learned that technology is not just about code, it's about creating experiences that resonate with users. I've honed my skills in crafting scalable and innovative solutions that drive customer satisfaction. At Publicis Sapient alone, I've been part of projects that have transformed client expectations through AI driven digital experiences one project even improved user engagement by 40% through a robust headless CMS implementation using AEM. What really gets me excited is leveraging cloud platforms like AWS to build resilient infrastructures that not only meet today's demands but are ready for tomorrow's challenges. Whether it was enhancing development workflows during my time at HSBC or tackling complex software configurations at Accenture, I've always focused on delivering high impact results that resonate with users. When I'm not immersed in code or architectural frameworks, you might find me engaging with tech communities sharing insights during meetups or mentoring budding developers who are just starting their journey. It's rewarding to help others grow while also learning new perspectives myself. I'm always eager to connect with fellow tech enthusiasts or explore collaborative opportunities that push the boundaries of innovation. If you're interested in discussing AI driven solutions or exchanging ideas about scalable architectures, feel free to reach out!. Skills: Full-Stack Development | Software Architecture | AI Driven Solutions | AEM (Adobe Experience Manager) | AWS (Amazon Web Services) | Scalable Systems | Headless CMS Platforms
